

Waste Management Questionnaire

What community are you from?

What types of waste management would you like to see in your community? (Think recycling, compost, hazardous waste collection, organized landfill, etc.)

How do you currently handle waste in the home? (recycle, compost, throw everything away...)

If the option was available in your community, would you start/continue to recycle?

What would you like to learn about waste management? (Eg. Health effects, environmental effects, where does it all go, how to, do's and don'ts, etc.)
